vriesdemichael | vriesdemichael

EDUCATION

UNIVERSITY OF TWENTE
Premaster Computer Science
Sep 2017 - Apr 2018 | Enschede
Premaster completed as a minor of Bachelor.

SAXION UNIVERSITY
Bachelor Computer Science
Graduated Nov 2018 | Enschede
Specialization in Big Data (30 EC).

SKILLS

AGENTIC ENG.
Claude Code, Antigravity, GitHub Copilot, MCP, custom harnesses, ADRs

GITOPS & CI/CD
ArgoCD, Helm, Tekton, GitHub Actions, Semantic Release, Renovate, Harbor, Nexus

CONTAINERS
Kubernetes, OpenShift, Helm, Docker, RHEL

PYTHON
uv, ruff, mypy, pytest, FastAPI, Typer, Operator Design, fastmcp

SECURITY & SRE
Keycloak, OIDC/OAuth2, K8s RBAC, Sealed Secrets, ESO, JSON Schema, OpenTelemetry, Splunk

DATABASES
CNPG, PostgreSQL, SQLAlchemy, pgvector, Teradata

FRONTEND
Playwright, Dashboards, Simple Portals

PROFILE

Senior DevOps & Platform Engineer specializing in containerized ML platforms and sovereign GPU inference. Enthusiast for Agentic Engineering; leverages AI agents in personal projects to radically scale development velocity, secure architectures, and enforce rigorous discipline (ADRs and deep integration testing). Integrates architectural foresight with automated security sweeps to build robust, production-ready systems.

EXPERIENCE

BELASTINGDIENST | Senior Platform & MLOps Engineer
Jan 2019 – Present | Apeldoorn, The Netherlands

- Co-developed Tekton CI/CD pipelines and standardized ArgoCD/Helm GitOps workflows to automate testing (pytest), static scans (ruff, Sonar, mypy), and OCI packaging.
- Engineered developer self-service platforms (OpenShift DevSpaces, Jupyter, private PyPI), bootstrapped sovereign CPU/GPU inference, and pioneered in-cluster PostgreSQL clustering (CNPG).
- Developed production-grade MCP-backed agents, hardened APIs (OIDC, Sealed Secrets, OpenTelemetry/Splunk/Langfuse), and served as Scrum Master in self-managed teams (SABEL/SAFe).

LUMINIS | Data Science Intern
May 2018 – Nov 2018 | Apeldoorn, The Netherlands

- Trained and deployed a deep learning model for image-based product categorization in Docker with a custom UI (Graded 9/10).

THALES | Software Developer Intern
Sep 2016 – Feb 2017 | Hengelo, The Netherlands

- Developed an interoperable Python interpreter running within a multithreaded C-based OSGi framework (Graded 9/10).

OPEN SOURCE PROJECTS

KEYCLOAK-OPERATOR | Python, Kubernetes
GitHub: vriesdemichael/keycloak-operator
GitOps-compliant operator for managing Keycloak instances, realms, and clients. Designed with multi-tenant delegation, admission webhooks for validation, automated drift detection, and high test coverage.

BITBUCKET-DC-CLI | Go
GitHub: vriesdemichael/bitbucket-data-center-cli
A production-focused CLI (bb) for automating pull requests, repository configuration, and bulk actions. Derived from OpenAPI specifications and designed as a stable interface for CI/CD and AI agent integrations.

[Note: Pages 2 and 3 are a single-column fallback optimized for automated ATS scanners and screen readers.]

PROFESSIONAL SUMMARY

Senior DevOps and Platform Engineer specializing in containerized ML platforms and sovereign GPU inference. Enthusiast for Agentic Engineering; leverages AI agents in personal projects to radically scale development velocity, secure architectures, and enforce rigorous discipline (ADRs and deep integration testing). Integrates architectural foresight with automated security sweeps to build robust, production-ready systems.

EXPERIENCE

Belastingdienst | *Senior Platform & MLOps Engineer*
Jan 2019 – Present | Apeldoorn, The Netherlands

- Led the engineering transition of data science workflows from standalone scripts to large-scale queue-based ML workloads, containerizing the stack in Kubernetes and OpenShift. Used ArgoCD for GitOps bootstrapping.
- Developed reusable MCP-backed agents for production usage.
- Set up initial local inference with enterprise GPUs to distribute limited capacity optimized for sovereign generative AI compute.
- Co-developed Tekton CI/CD pipelines automating quality/testing checks (ruff, Sonar, mypy) and OCI artifact packaging (Nexus, Harbor) with Helm post-sync integration tests.
- Engineered developer self-service platforms (OpenShift DevSpaces, Jupyter, private PyPI) and pioneered in-cluster PostgreSQL clustering (CNPG) to replace unsupported legacy database systems and bypass IT blockers.
- Developed production applications scoring among the highest for security in the organization, and participated in DSOMM DevSecOps assessments.
- Hardened platforms and APIs using robust security protocols (OAuth, OIDC, Sealed Secrets, network policies).
- Managed structured pod logs for central Splunk collection and established OpenTelemetry/Langfuse tracing.
- Worked in self-managed Scrum teams (ranging from 3 to 15 members) under the SABEL framework (SAFe adaptation), serving periodically as Scrum Master.

Luminis | *Data Science Intern*
May 2018 – Nov 2018 | Apeldoorn, The Netherlands

- Trained and deployed a deep learning product categorization model using product images, packaged in a Docker container with a custom user interface (Graded 9/10).

Thales | *Software Developer Intern*
Sep 2016 – Feb 2017 | Hengelo, The Netherlands

- Developed an interoperable Python interpreter running within a multithreaded C-based OSGi framework (Graded 9/10).

Comyoo | *Web Developer*
Sep 2014 – Oct 2015 | Enschede, The Netherlands

- Developed web applications utilizing Angular and Joomla database systems.

OPEN SOURCE PROJECTS

keycloak-operator | *Python, Kubernetes*
GitHub: github.com/vriesdemichael/keycloak-operator

- Developed a production-ready, GitOps-compliant Keycloak operator facilitating cross-namespace realm and client configuration.
- Set up comprehensive automated test coverage, example validation, and automated GitHub Actions workflows featuring documentation builds testing code snippets against live examples.

bitbucket-data-center-cli | *Go*
GitHub: github.com/vriesdemichael/bitbucket-data-center-cli

- Built a Go-based command line interface (bb) for Bitbucket Server/Data Center enabling automated repository/PR operations, derived from OpenAPI specifications and designed as a stable interface for CI/CD and AI agent integrations.

EDUCATION

Saxion University of Applied Sciences | *Bachelor of Computer Science*
Graduated Nov 2018 | Enschede, The Netherlands | Specialization in Big Data (30 EC)

University of Twente | *Premaster Computer Science*
Sep 2017 – Apr 2018 | Enschede, The Netherlands

SKILLS

Agentic Engineering:	Claude Code, Antigravity, GitHub Copilot, MCP, custom harnesses, ADRs
CI/CD & GitOps:	ArgoCD, Helm, GitOps, Tekton, GitHub Actions, Semantic Release, Renovate, Harbor, Nexus
Containers & Platforms:	Kubernetes, OpenShift, Helm, Docker, RHEL, Linux
Python Ecosystem:	Python (expert), uv, ruff, mypy, pytest, FastAPI, Typer, K8s Operator Design, JSON Schema, CRD
Security & SRE:	Keycloak, OIDC / OAuth2, Kubernetes RBAC, Sealed Secrets, ESO (knowledge), OpenTelemetry, L
Databases:	CNPG, PostgreSQL, SQLAlchemy, pgvector, Teradata
Frontend:	Playwright, Dashboards, Simple Portals
